DUST CONTROL ON GRAVEL ROADS

Dust control measures on local roads are available for any resident, municipality, or township through the following vendor:

SW Dust Treatment
A Division of Lamberton Stockyards
43709 175th St.
Springfield, MN 56087
Phone: 507-220-8699

Additional Contact Person: Darvin Voge at 507-752-7782

The dust control measures involve application of a liquid magnesium chloride solution usually applied in early June with a possible second application later in the summer, usually in August. It is effective controlling dust problems through the summer months under normal conditions. Standard application is 20 feet of roadway width and approximately 400 feet in length along the roadway.

Sincerely,

Ernest G. Fiala, P.E.
County Engineer
